May stimulate incotropha directly to secrete PRL. TISSUE SPECIFICITY: Widely expressed, with highest levels in medulla obloggata and hypothalamus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       N

1. FUNCTION: CATALYZES THE COVALENT ATTACHMENT OF UBIQUE PROTEINS (BY SIMILARITY).

2. CATALYTIC ACTIVITY: ATP + UBIQUITIN + PROTEIN LYSING PYROPHOSPHATE + PROTEIN N-UBIQUITYLLYSING.

2. PATHWAY: SECOND STEP, IM UBIQUITIN CONJUGATION.

2. MISCELLANEOUS: A CYSTEIME RESIDUE 18 REQUIRED FOR UBITIOLESTER FORMATION (BY SIMILARITY).

2. SIMILARITY: BELONGS TO THE UBIQUITIN-COMJUGATING ENZINGLES A CASACSESS 1.

No. is the number of results predicted by chance to have a
re greater than or equal to the score of the result being printed,
is derived by analysis of the total score distribution.

The antibodies can be used in diagnosis or to treat or prevent diseases associated with abnormality in the pituitary function regulatory mechanism (e.g. promotion of prolactin secretion), central nervous regulatory mechanism, and pancreatic function regulatory mechanism. The antibody-based immunoassay can also be applied in clarifying the physiological functions of the ligand and its derivative Sequences AAY49290-302 represent peptide fragments of the 19p2 ligand.
The invention provides a monoclonal antibody which has a specific reaction with the part peptide of the C-terminal of 1922 ilgand or its derivative. The antibodies can be used in diagnosis or to treat or prevent diseases associated with abnormality in the pliuitury function regulatory mechanism (e.g. promotion of projectin secretion), central nervous regulatory mechanism, and pancreatic function regulatory mechanism. The antibody-based immunosassay can also be applied in ciarlifying the physiological functions of the ligand and its derivative sequences AAY49290-302 represent peptide fragments of the 19P2 ligand.

RESULT
AAW31394
    This sequence represents a peptide fragment from a novel human type colligand polypeptide corresponding to amino acid residues 34 to 53 of the consequence represented in AAW31390 and is used in an assay to monitor cliqued binding to the G protein-coupled receptor protein. Pharmaceutical compositions containing this ligand may be used as a pituitary function compositions containing this ligand may be used as a pituitary function composition containing this ligand may be used as a pituitary function composition containing this ligand may be used as a pituitary function condulator. This sigand could have specific applications as a comphylactic or therapeutic agent for dementia, depression, hyperkinetic syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, contrama, growth hormone secretory disease, hyper-and polyphagia, contrama, growth hormone secretory disease, hyper-and polyphagia, contrama, diabetes, cancer, pancreatitits, renal disease, curvanta, hyperpolactinaemia, diabetes, cancer, pancreatitits, spinal injury, contransient brain ischaemia, epilepsy, amylotrophic lateral sclerosis, content myocardial infarction, infertility, spinocerebeilar degeneration, confident brain ischaemia, epilepsy, amylotrophic lateral sclerosis, and content pratial assays can also be developed to screen compounds which are capable of altering the binding activity of the ligand affecting activation of the G protein-coupled receptor protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              몆
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ş

                                                                                                                                                                                              This invention describes a novel oxytocin secretion-regulating agent which contains a ligand peptide or its salt for the 6 protein-coupled receptor protein. It is useful in the form of drugs for amellorating, preventing and treating diseases relating to oxytocin secretion e.g. weak pains and atonic bleeding, before and after expulsion of placenta, iterine recovery failure, caesarean section, stoppage of artificial fertilization or galactostasis and is also applicable in veterinary medicine for promoting milk production in cow, goat and pig. This sequence represents a human peptide which acts as an oxytocin secretion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Physiologically-active polypeptide recognized as ligand by G protein-coupled receptor protein, for promoting secretion of oxytocin, as drugs for diseases relating to oxytocin secretion and in veterinary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; oxytocin secretion promoter; G protein-coupled receptor protein treatment; disease; pain; atonic bleeding; uterine recovery failure; caesarean section; artificial fertilization; galactostasis; goat; pig;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAB10365 standard; peptide;
